LECTURE MATERIAL: COMMUNICATION SKILLS

EDWARD NKONDE

Table of Contents

Course objectives…….3

Lecture One: Introduction……..….4

The nature of communication…….4

Content……....5

Method, channel, media……..5

Timing…….5

The influence of aims of communication on their elements……...6

The communication process……6

Why do we communicate?.....7

Lecture Two: classification of communication 9

Formal/informal communication…….....10

Written communication……11

General guidelines for writing skills……11

Oral communication…….....12

Verbal and non-verbal communication…….…...13

Upward, downward, diagonal and horizontal communication…….14

Lecture Three: Advantages and disadvantages of different types of communication…….16

Choosing the most efficient and effective method of communication …….....19

Lecture Four: Study Skills……...……21

How to improve your study styles- productive study techniques…….…....22

General guidelines on study skills……..……23

Guidelines on listening…….25

Sentence connectors in a lecture to communicate management functions…….27

L**ecture Five**: writing skills for essays……..28

Writing the body of the essay……30

L**ecture Six**: Citations and References……..37

Making critiques to the existing literature…….38

Citing a government papers or a document written by a ministry…….....39

Writing references…….....41

Lecture Seven: Exam Questions…….....45

Course objectives

Students should be able to:

1. Define and describe various types of communication.
2. Understand the importance of communication in business context
3. Identify various principles of communication relevant to a given business context
4. Explain the advantages of different types of communication
5. Identify various barriers to effective communication in organizations.
6. Appreciate important writing skills for academic papers and assignments
7. Identify the various sources of information for university students
8. Appreciate important study skills

LECTURE 1: INTRODUCTION

In an attempt to introduce the concept of "Communication" Kreitner (1995:366) asserts that "one of the most difficult challenges for management is getting individuals to understand and voluntarily pursue organizational objectives……...given today's team-oriented organizations where things need to be accomplished with and through people over whom a manager has no direct authority, communication skills are more important than ever".

What is communication? Maurice Waite (2001) uses a number of synonyms to define the concept. He says communication is the transmission, conveyance, dissemination, dialogue, broadcast or promulgation. Kreitner (1995:368) simplifies the definition by simply saying 'communication' is interpersonal transfer of information and understanding. Hybels (1998), Kaul (2000) postulates that the best way to understand communication is to look at it as a process. It is a process in which people exchange ideas, feelings and information. The debate about definition of communication has been there for decades. For instance in 1974, Batty defined communication as the transmitting of instructions and information to all interested parties-employees, customers, suppliers, shareholders and general public (p, 28).

One of the more comprehensive definitions is one stated by Sillars who says that communication is the giving, receiving or exchange of information, opinion or ideas. This can be done by writing, speech or by non-verbal. It is in most cases done by combining various types of communication. This means that in one communication scenario, we may combine oral, written and non-verbal acts to create understanding.

THE NATURE OF COMMUNICATION

Going by the few definitions of the concept of communication, we can infer that it is a discipline that cuts across many fields. Consequently, many scholars can define it in many ways. The best way to conclude the debate is to pick up threads that cut through most of the definitions. One fact is clear, whatever definition different scholars will give, that definition will be describing the movement of a message from the sender to the receiver. However, that movement is not a simple one. It is a complex process. It involves a number of "actors at play". These factors or elements usually interact in a complicated way. In one scenario one element will influence the choice of the other elements; in another, one other element will be the determining factor of the rest. The

major factors in the communication process are: 1. **The encoder, 2.The decoder, 3. Content, 4. Channel, media or method, 5. Objective for communication, 6.Timing of sending the messag**e.

Examples of how the elements can influence the communication process:

CONTENT

When dealing with content or message the sender will have to use a media, method or channel that will quickly disseminate the information. E-mail, telephone, fax, face-to-face communication may be preferred in urgent disseminations. However, as we will see later, these have their own drawbacks, which the sender should analyse critically. The nature of the message may also determine the decoder or receiver. If a company is running a series of workshops on the same operations of the firm, they will have to sit down and decide which of their several employees will attend the workshops. The choice will depend on;

i. The palatability of the material (content). The material must be easy enough for the receiver. If the material is too complex, it will exclude some employees.
ii. Secondly, the content should be relevant. Employees should not attend seminars, symposiums, conferences or workshops that are not dealing with their Education and Training needs.

METHOD, CHANNEL, MEDIA

Sometimes the available media will determine the choice of audience, receiver and the material to convey. When the company wants to advertise something through the press, they will have to prepare another advert for those that cannot be reached through print media. For instance the customers in remote areas or those who cannot read for one reason or the other will have to be reached orally.

TIMING

Sending a message to the receiver can also depend on the situation surrounding the receiver. It is wrong to give somebody a very important message at the following times;

i. When they are about to knock off after a tiresome exercise

ii. When they have just come out an excessively exciting or disappointing event

iii. When they are discussing a very sensitive topic with some one

iv. When they are listening to someone captivating news item during a T.V news cast.

THE INFLUENCE OF AIMS OF COMMUNICATION ON THEIR ELEMENTS

The aim of communicating a given message may influence the choice of other elements. Some of the aims of communication are "to inform" "to motivate" "to solicit support" "to deter bad behavior". Each of these aims may force the sender of the message to package the message in a certain way, use a certain method and disseminate at as time deemed appropriate.

So far we have been looking at the nature of communication and its elements. These elements can interact in a number of ways. A good communicator must know how each of these elements can influence the others. Now that we have an idea of how complex the communication process can be, let's summarise the process conceptually.

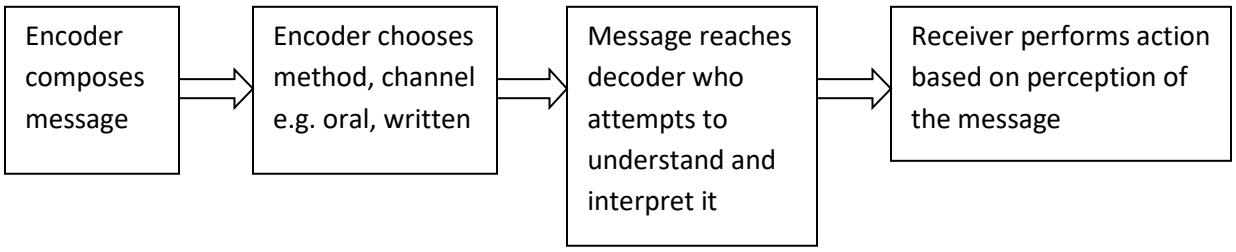

Figure 2 The communication process

Another way of expressing this is as follows:

Step 1- need to communicate arises

Step 2- the identified message is composed, encoded or packaged.

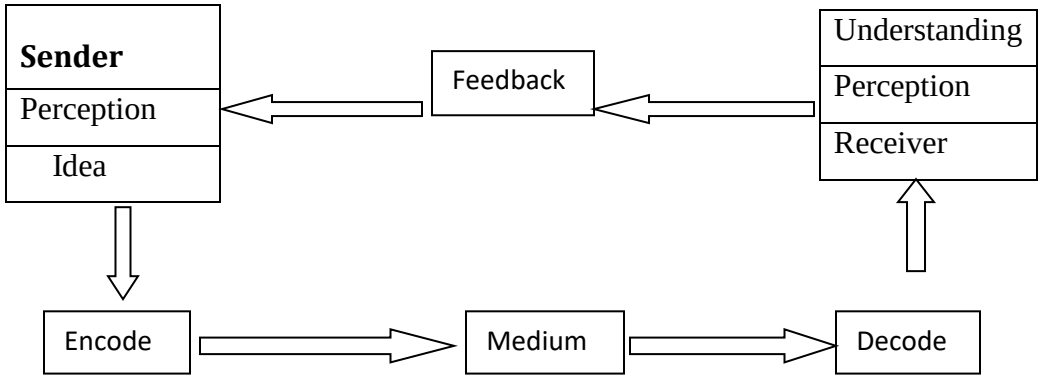

Step 3- decoder identified (if not obvious)

Step 4 message is relayed through appropriate media

Step 5- message reaches decoder, who interprets it

Step 6- decoder gives feedback

Kreitner suggests that the communication process is understood better if we look at it as a cycle, as illustrated below.

The basic communication process by Robert Kreitner (1995)

WHY DO WE COMMUINCATE

From your own observation, you will agree with the assertion that companies and their employees spend most of their time each day, week, month and year communicating.

From the time each worker reports for work, up to the time they leave their work place, they are involved in one act of communication or the other. It may be internal or external communication. It could be oral, written, non-verbal or a combination of the three. It may be effective or ineffective communication. If we analyse what goes on in all communication acts we communicate to achieve the following:

1. To get something done; this can be someone in authority commanding or requesting people under him to perform some action or carry out instructions.
2. An employee may be requesting for information from colleagues, or superiors.
3. Subordinates communicate feedback to superiors.
4. The company may be winning customers through effective regular communication with potential clients.
5. To persuade stakeholders for their involvement in carrying out important policy changes.
6. To maintain existing customers
7. To communicate policies, regulations to staff
8. To co-ordinate, control and direct operations of the company among the employees

9. To sell company or organizational values, mission and culture to both employees and customers
10. To communicate the company's image to the general public.
11. Used in conflict management
12. Used in employee counseling

Summary: why we communicate;

- **To inform**- give employees, customers and general public needed information and data.
- **To request**- to ask for information from people who have it
- **To educate**- to help people understand why certain decisions have been taken.
- **Human relations**- giving information for the sake of maintaining relations
- **To instruct**- to let people carry out some functions
- **To communicate management functions**-e.g. plans, controls, policies.
- Making employees understand what management is doing for them Mainiero (1999)

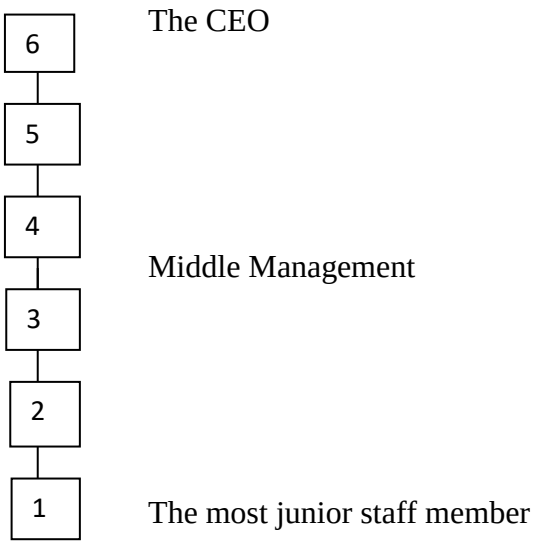

LECTURE TWO: CLASSIFICATION OF COMMUNICATION

There are many ways of classifying communication. These include 4 common ways of conceptualizing communication. We can classify communication

1. According to formality
   1.1 Formal Communication
   1.2 Informal Communication
2. According to channel
   2.1 Oral Communication
   2.2 Written Communication
3. According to direction
   3.1 Upward Communication
   3.2 Downward Communication
   3.3 Horizontal Communication
   3.4 Diagonal communication
4. According to word use
   4.1 Verbal Communication
   4.2 Non-verbal communication

Formal/Informal Communication

Formal Communication involves the use of formal routes, language and media styles. Organizations have formal communication routes. There is a formal chain of communication within the organization structure. The communication procedure will follow the line of authority from bottom to the top.

The official procedure of communication here is going up or down the chain. For instance if an employee at the bottom has a problem, he will have to communicate to his immediate supervisor i.e. No 2, who communicates the matter to No 3; then No 4, 5 until the matter reaches the CEO (No 6). The communication has followed the laid down route or the formal route. It is therefore called formal communication. Usually this communication also uses formal language i.e. it avoids slang, Colloquial or local idiomatic expressions. It also uses official media like formal letters, memorandum or meetings.

If an employee, for instance, communicates his problem to a senior member of staff above his immediate supervisor, that communication has not followed the laid down route. This not followed the laid down route. This is common at company functions like end of year party, funeral gathering of a staff member or during Tea break in staff canteen. Some companies use these scenarios for informal interactions. These informal gatherings can be very useful for

informal communications. There are times when issues that could not have reached the ears of the top management, filter through GRAPE VINE.

WRITTEN COMMUNICATION

"Writing is part of every job. In fact, your potential contact with your employer is through your letter of application, which determines a company's impression of you. And the higher you advance in an organisation, the more writing you will do. Promotions are often based on a person's writing skills" Kilon (2001:3).

Written communication at work comes in many forms. Some of these are:

- Memoranda (memos)
- Various types of letters especially formal letters
- Instructional manuals
- Company policies and regulations
- Briefs, bullets
- Minutes, Brochure
- Reports, press release
- E-mails, Catalogue
- Faxes
- Price list
- Invoice

General Guidelines for Writing skills

Plan your work well to do the following:

a) Identify your audience-you need to establish the possible reader, receiver, decoder of your message. Who is going to have access to your written message.
b) What is their educational, social and economic background. This helps in giving appropriate illustrations of your written message.
c) Decide how you should present the material. I.e. writing style. Is it schematic, prose or a combination of the two- this is sometimes called the format.

d) Decide on the tone of the material. The tone is determined by choice of words, phrases and sentences. Depending on the choice of these structures, your write-up can have a formal tone, informal tone, official tone, friendly tone, casual tone.

e) Construct sentences that are easy to read.

The sentences should not be wordy or too long. Your sentences should be well blended from the following list:

- Simple sentences
- Complex sentences
- Compound sentences
- Short sentences
- Long sentences

f) Clarity-use words, phrases that will bring out your thoughts clearly. Avoid Euphemism, jargon, idiomatic expressions that may not be understood by your reader. Construct short, familiar words and phrases.

g) Use the correct level of language, syntax

h) Construct short paragraphs (but not too short)

i) Lastly read and proof read to weed out emotional words that may irritate, hurt or disturb your reader. Make sure all your sentences say what you mean. Edit also for correct spelling, grammar, punctuation and syntax.

These guidelines on writing skills are general principles. Each form of writing has several additional guidelines which we will look at later when we turn to the sections dealing with such correspondence or topics.

ORAL COMMUNICATION

This refers to communication by speech. It may come through:

- Telephone conversation
- Oral, report presentations
- Meetings
- One-to-one (face-to- face)
- Tele conferencing

- Common at seminars, symposium, vivas, workshops and conferences
- Briefs

Oral communication usually uses spoken English and can combine with body language. Detailed discussion of these various forms of oral communication will be done in separate sections of the module.

Verbal and Non-Verbal communication

The term verbal here refers to the type of communication that uses words. In other words verbal communication refers to 'word communication'. Consequently non-verbal communication implies no-word communication.

While in some circles verbal communication refers to oral communication, in this module verbal goes beyond oral. It will include written communication.

Examples of Verbal Communication

0ral communication	Written communication
a) Meetings	a) Letters
b) Interviews	b) Bulletins
c) Telephone	c) Minutes
d) Face-to Face	d) Couriers
e) Lectures	e) Reports
	f) Invoices
	g) Memos

Examples of Non-Verbal Communication

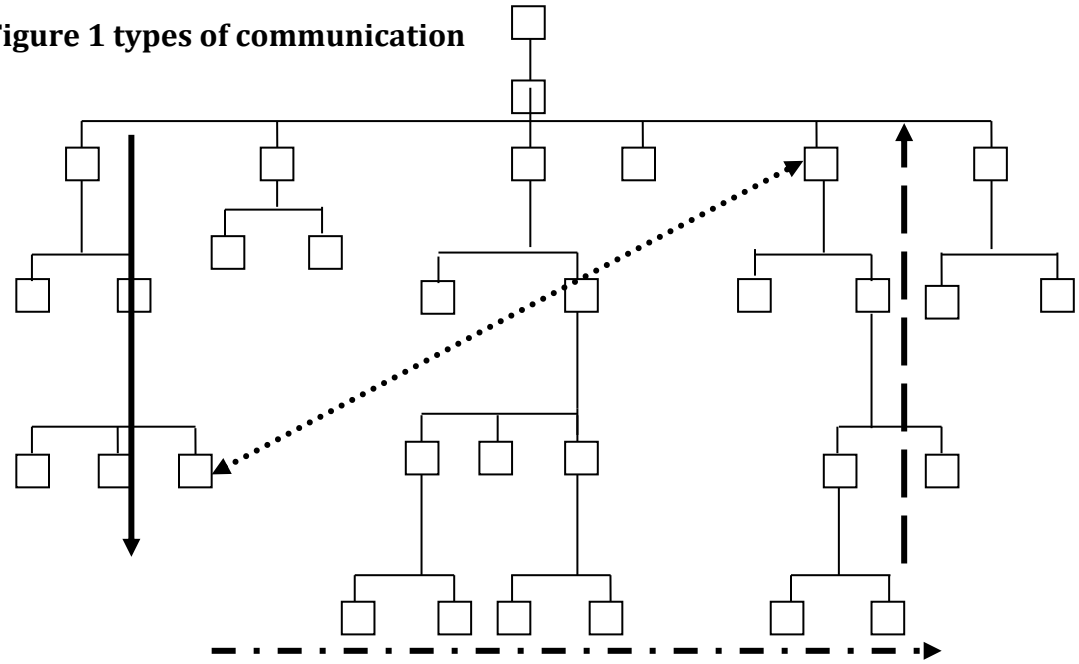

1. Dress, appearance
2. Colour
3. Distance, space
4. Body language including posture and eye contact
5. Signs e.g. road signs

6. Smells, fragrance, aroma
7. Land scaping, décor
8. Furniture arrangements at meetings
9. Silence
10. Tone
11. Physical contact, touch

Upward, Downward, Diagonal and Horizontal Communication

The four types of communication are understood better if we illustrate them in an organisation chart.

Figure 1 types of communication

Key

Downward Communication

Diagonal Communication

Upward Communication

Horizontal Communication

Downward Communication

Downward communication transmits announcements, policies, and instructions from senior management to subordinates. So it moves from the top and goes down.

Upward Communication

Upward communication as the term states is one that goes up. It transmits feedback from subordinates to superiors. When the subordinates received downward communication, they received announcements, instructions, policies that they were to act upon. Now they must give feedback in form of reports.

Horizontal Communication

This is the type of communication that moves horizontally from one department to another. It is used mainly in co-ordinating operations. A good company or organisation ensures that there is harmony among its various sections or departments. For this to be effective, different heads of departments or heads of sections should regularly exchange notes. This type of communication that involves colleagues is horizontal.

Diagonal Communication

Diagonal communication as figure 1 illustrates, cuts across departments. It could be communication from a senior officer from the Engineering department making a follow-up on a payment voucher that an accounts clerk is preparing in the finance Department. A junior officer in the Human Resource department may be communicating something urgent to the store's manager. These are all diagonal communications. The companies and organizations with dysfunctional (Sick Bureaucracy) do not allow diagonal communication.

LECTURE THREE

ADVATAGES AND DISADVANTAGES OF DIFFERENT TYPES OF COMMUNICATION

Advantages of written Communication

a) Provides a permanent record of communication. In some cases, it is safer to have a record of what has been communicated to other people. In future, need may arise to show proof of the communication, e.g. contract, conditions, payments, business agreements.
b) Written communication can act as a reminder of what is to be done and what has already been done.
c) Written communication can facilitate a thorough discussion of matters. When you meet at a round table, written working papers can help speed up and guide the discussion e.g. a written agenda is easy to verify.
d) Written communication gives chance to the sender to edit and refine material before it is finally communicated.
e) Some written communication helps in avoiding waffling e.g. forms. Most forms ask for specific information to be inserted in a small space. This force the respondent to just give the required answers-there is consequently no room to waffle.
f) Written communication helps the message to reach many people without distortion. Unlike spoken, oral communication gets distorted as it moves from one person to the other.
g) The receiver can read the received message as many types as he wants until he fully understands the message.

Disadvantages of written Communication

a) It excludes some people from the message. Written communication is exclusively for people who can read and write.
b) When reading written messages, somebody can do other things. Consequently communication demands exclusive attention
c) Written communication requires sophisticated communication such as;
    - Paragraphing

- Spellings
- Capitalization
- Use of topic sentences, transitions.
- Punctuations

There are very few people who have mastered these important skills.

ORAL COMMUNICATION

Advantages of Oral Communication

a) It is more impressive and lively because the sender involves voice modulation, projection, pitch and sometimes body language
b) The sender can make immediate clarification, correction, when necessary.
c) Since it doesn't use stationary it is cheaper
d) It has a wider audience because it includes receivers who cannot read and write
e) It ideal for controversial issues because it allows immediate exchange of views, opinions.
f) It is faster than written communication e.g. phone, face-to-face
g) The sender receives instant feedback from the receiver. This is because he can see their reactions, responses to his message

Disadvantages of Oral Communication

a) If the message is passing through many people, it ends heavily distorted. A message which started as A, can end up as P, M, or even Z after going through so many people.
b) The sender has no time to edit, refine the message. Once the message is said out and heard, corrections do very little to heal the heart if that message was in bad taste.
c) Shy people can be intimidated by personalities that are over bearing. Consequently their good messages may be stifled.
d) There is no record for future reference. If the matter rises up in future, it is difficult to prove that the matter was discussed. This is why company meetings keep a record of deliberation called MINUTES.
e) In a meeting, over bearing personalities can take over the deliberations, this can reduce the discussions to one man's ideas only.

Advantages of Non-Verbal Communication

a) Faster than the other form s of communication-e.g. body language which include gestures, facial expressions, posture, and head nodding.
b) It gives additional information to the oral expressions during the interview a good interviewer gets a lot of information from the candidate from his body language. The application letter, C.V and academic papers fail to give a full picture of the applicant's personality. The candidates' body language reveals it all. The way he walks, sits, carries his posture and their facial expressions bring out their personality. When a candidate says something, you may get confirmation from their eye contact, head, posture and gestures.
c) Non-verbal communication summarises a long message e.g. a sales person does not have to painstakingly give a lengthy description of an object, when all they need is to show a picture, diagram, drawing, painting or sample of the object they are selling.
d) Non-verbal communication leaves indelible impressions on the mind of the receiver of the message. When a lecturer or speaker is presenting their talks, we find it difficult to forget their graphics-e.g. pie charts, pictures, histograms, body language. These tend to linger longer in our minds than their oral expressions.

Disadvantages of Non-Verbal Communication

a) It is difficult to use non-verbal alone to give a complicated argument. While in some cases non verbal cuts the long story short, sometimes you need the aid of other types of communication to complete long argument. E.g. you may write a long essay with several graphics and pictures to put a point across
b) Non-verbal communication can misrepresent facts. A shy presenter may portray a wrong picture to his audience. Their plight may give an impression that
    i. They do not know what they are talking about.
    ii. They are lying-not telling the truth. Consequently take their message with a pinch of salt
    iii. They most likely not well trained in their subject area.

I have personally been corrected along the way. People I thought were mean, rude and unreliable proved to be fine gentlemen that I later enjoyed talking to. Their non-verbal idiosyncrasies misled me. By their appearance, some very rich people (Billionaires) may look too simple to be so. At the same time some poor people disguise their poverty in meticulous elegant dressing.

CHOOSING THE MOST EFFICIENT AND EFFECTIVE METHOD OF COMMUNICATION

Having looked at the advantages and disadvantages of various types of communication, let us now look at the choice of media for communicating our messages before we give the tit bits on the process, let us look at the difference between EFFECTIVENESS and EFFICIENCY.

In some circles effectiveness and efficiency are used as synonyms. In this lecture they will be used as two different concepts. Effectiveness involves obtaining the intended results while efficiency points to optimal utilization of resources. Consequently, in our topic effective methods of communication are those methods that will give us the intended results. Efficient methods of communication are those that are less costly and at the same time they give us the intended results. This may sound confusing but it will be clear as we proceed in our lecture.

AN ILLUSTRATION

One way to communicate my lectures effectively would be to sit down with them and explain to the individually. I would travel to their places or call them to my place and explain to them individually or in small groups. We could have interactive lectures where they can ask questions. At the end of 3-4 days of discussions with individual students, I would drop dead out of exhaustion. Students would be fully explained or the intended results were met, but not EFFICIENTLY.

This illustration means that not all Effective methods of communication are efficient. Sometimes a method that will easily give us the intended results may not be the best because it may be too expensive i.e. not efficient.

On the other hand, it is also possible to use a less expensive method which does not yield the intended results. The best approach is to balance between efficiency and effectiveness. Choose a communication method that will yield intended results cost effectively. This means one that will

not be extravagant or wasteful. Waste of resources here doesn't only look at time. Most people assess efficiency in terms of time only. Resources are many. They include of course time, money, human resource, physical infrastructure and equipment. When we are communication we should assess how many resources will be used in communicating.

a) By writing
b) Orally
c) Non-Verbal

But also the level of getting the message across. As a University we usually combine the three in the methods of communicating our lectures.

LECTURE FOUR: STUDY SKILLS

To study is to read or research with a view to gaining deeper understanding of a subject at hand. This is what is expected from a University student. In Universities learning is a partnership between the lecturer and his students. Each does their part while the lecturer facilitates the learning process, the students completes it by doing the rest. Learning in Universities calls for great participation on the part of the learner (student). Learners in Universities and colleges are called students because they study. This lecture, therefore gives you highlights on study skills. For you to prepare good assignments, or prepare thoroughly for tests and exams you need these study skills.

Guidelines for effective Studies

1. Begin by developing a systematic approach to your studies. Don't allow your body to dictate you on what to study. Give a specific time to each course. If you don't plan you will find yourself spending too much time on courses that you enjoy doing. Remember in Universities courses move as a set. If you fail some of them you may have to remain behind. So each course deserves ample study time.

   Common sense shows that the human mind is very deceptive. The mind would want you to spend most of your study time on courses that you enjoy most, and yet the other courses that you don't like are equally important. Life demands that we balance our activities. We have to do even things that we don't seem to enjoy if those things are important. Most children don't like eating vegetables, or flat foods. They always want to take sweet things, but dieticians would condemn those feeding styles, because children would be surviving on unbalanced diets. Similarly you need to discipline yourself to allot adequate study time to each course.
2. When you prepare a study time table make sure it works. Don't procrastinate tasks. This term means pushing today's work to the following day. When the following day comes, you want to put off that work again to the next day. There is a saying that says "procrastination is the thief of time".
3. Regard the so called free periods as study time. These periods can be used to review your previous lecture notes or working on your assignment.

4. Time to relax is important but know when to relax e.g. you can set the whole day on Sunday or Saturday free. During the week have one or two evenings for social activities.
5. When studying prepare to study seriously for 3 hours. E.g. 20-23hrs but with breaks of 5-10 minutes. You should not study continuously for 3 hours. You may find yourself becoming less productive towards the end of the 3 hours.
6. How to use the 3 hours productively.
    a) Scan, skim and study for 55minutes. Take a short break for 5 minutes.
    b) Read and study for another 55 minutes. Take a break.
    c) In the last one hour, go through past exam questions or questions based on the material you were reading. Attempt to answer these questions without referring to the material and see how many you can answer correctly. The best thing is to form a study group that can regularly meet to discuss the past exam papers or similar questions.
    d) If you don't have past exam questions, you can simply Review on your own what you have been reading in the first 2 hours. One of the reasons why many students forget what they study is because they use unproductive study techniques. One of the productive study styles is what has just been mentioned above.

7. HOW TO IMPROVE YOUR STUDY STYLES- PRODUCTIVE STUDY TECHNIQUES

a) After your first revision, of your material follow it up with more well spread out revisions. You should imagine a farmer who has a fertile garden. He doesn't weed once. The first weeding may be followed by more subsequent weeding. The advice here is to avoid cramming. Some students procrastinate or over relax in the first few months. They swing into action when there is a test or an exam around the corner. They sit down for hours on end to cram and force things in their minds including material whose meaning is long forgotten. This is unproductive. Research shows that forgetting of learnt things takes place within the first two days. To improve our memory, we should therefore review our lecture notes within 2 days of learning.

b) Read your literature notes or textbooks, handouts with understanding make sure you understand what you read. If you can't understand the material, consult

friends or other textbooks that have been explained the words, terms, phrases in a different a different way. Check for instance on the internet. E.g. Google, Amazon, yahoo websites.

The brain easily recalls things that have been understood

c) Organize your material in form of briefs. You can have study cards where you have summarized your work in form of diagrams, lists, charts etc. You can even carry these in your pockets. There are times you have to wait for someone at a bus station or airport. You can use such waiting time productively by pursuing through those summarized notes on study cards.

d) Relate the things you learn in some way. When people call out figures like telephone numbers, they are amazed how I can remember them without jotting the numbers down on a piece of paper.

I usually relate the numbers to important dates in my life.

e) Use Mnemonic to recall some read material. You may find a way of coining a term or acronyms of the phrases, sentence or idea. You recall how you memorized the nine planets in primary school. You memorized what each first letter stood for in a sentence. " **M**y **V**ery **E**arnest **M**other **J**ust **S**ent **U**s **N**ew **P**otatoes"

M-Mars

V-Venus

E-Earth

M-Mercury

J-Jupiter

S-Saturn

U-Uranus

N-Neptune

P-Pluto

General guidelines on Study Skills

1. Improve your reading skills. Find out the meaning of the following reading types
   a) Scanning
   b) Skimming

c) Intensive reading

2. Organise your study desk. Make sure you only have things that should be there. Clear your desk weekly. Remove what you don't need immediately. This should be done to avoid mixing important things with the less important. You waste a lot of time looking for a past paper or a hand out hidden in an ocean of papers. That time could have been spent productively. If you miss things 5 times in a week and spend 30 minutes looking for each of them, you will lose 2 ½ productive hours on for misplaced things. This is a lot of time wasted.
3. Learn how to socialize some friends, visitors can easily take away your precious time. Some of them come at a time when you have planned to do some serious work. They are socially very important in your life but should not be allowed to derail you. Some of them even come with issues that will demand your time. Learn to streamline obligations. You don't have to say "YES" to every request. Sometimes we feel bad to disappoint friends by turning down their invitation or request. But do so for the sake of your academic progress especially for those of you who are popular to friends. You may have 3-5 drop-in-visits each taking 30-45 minutes of your study time.
4. Take down good notes during lecture time. When lecturers come in a lecture room, they come with a lot of important things to explain. You need to develop note taking skills. The following are the guidelines for note taking
   a) Listen more and write less-take down only salient points.
   b) Learn how to reduce long phrases, words or sentences to an acronym or abbreviation.

      E.g. definition=defn

      Should='shd government= govt

      Message=msge between= btwn

      With the coming of SMS abbreviations people have come up with a lot of abbreviations that help them to quickly take down notes. But remember what each of those abbreviations mean. In addition avoid those abbreviations in assignments and exams. I have found it very irritating to guess what a student is trying to put across when their essays have a lot of SMS abbreviations. Let

SMS language end in your rough notes. Later Review your notes and write them properly.

5. Re-visit your notes as we have already advised. Make sure you use your free period to review the lecture notes. This is because after sometime you may not recall what the lecturer said on a given point especially new and complex material. You revisit the notes to do the following:
    - To consolidate understanding
    - To replace SMS language with better abbreviations
    - To expand where necessary
6. Avoid distractions during lecture time. The following can distract you during lecture time.
    - The lecturer's positive or negative appearance-their dress, their idiosyncrancies, and mannerisms.
    - Playful, talkative classmates sitting next to you.
    - Your own day dreaming (next time you attend a lecture, try to count how many times your creative, active mind will take you out of the lecture time. It will take you out to so many places-to Shoprite, PEP, farm, to your favorite restaurant or bank.

      Learn to discipline your brain to fight off distractions.

      Lecture time is a very important moment. You can't afford to miss those important explanations from the subject "Gurus"

GUIDELINES ON LISTENING

1 What is listening?

Murphy and Perk (1890) define listening as "seeing the expressed idea and attitude from the speakers' point of view, to sense how it feels to him or her, to achieve that frame of reference. In this regard to the thing the speaker is talking about"(p 679).

The Oxford Thesaurus defines listening as paying careful attention to be attentive, to concentrate, to take note of. From these definitions, we can infer that listening does beyond merely hearing. As a University student you are going to do a lot of listening during:

- Lecture time
- Group discussions
- Paper presentations
- Tutorials

Consequently, you need to take note of the following comments on listening.

1. Listening engages your mind. You cannot be idle if you are actively listening. So take down notes as somebody speaks.
2. Pay attention to what is said and also to the manner in which it is said. This means "listen" to the feelings as they come out through tone, eye contact, posture, gestures and paralinguistic's during lecture time, seminars symposiums, learn to listen to the words that are being said but also take note of the non-verbal communication going on. In the most cases, non-verbal communication brings out more information than the spoken words. Non-verbal carries the speakers' deep hidden feelings about the matter.
3. When somebody is speaking fight against your own distraction e.g. prejudice against the topic, the speaker's appearance, dress, background. Pay attention to what is being said rather than to who is saying it. Sometimes we are put off by the speaker's personality-or even appearance. You may dislike the speaker because of your religious, tribal, racial prejudices. Fight against these, because what is important is what is coming from them and not their personal idiosyncrancies.
4. When listening discriminate the received material, analyse it and group it thematically in your mind and note book. Pay attention to the transitions the speaker is using. These will guide you in discriminating of grouping and analyzing the material.

   The speaker may use transitions like the following

   f) The first thing to look at is……
   g) The second meaning of this concept is…….
   h) The third sense we can use this word is……
   i) As has already been explained…….
   j) These then are the three meanings of……

k) Before we can proceed to the last point, let's review what we have said so far……..

l) In the light of this explanation we can safely conclude that…….

m) It is important to note that not only has this debate been long but also wide spread.

n) At this point, it is interesting to note that…….

o) Another favourite definition of efficiency is ……

5. Avoid interruptions-allow the speaker to finish his presentations. Ask them questions at the end.
6. Show the speaker by tilting your head, eye contact that you are listening.
7. In some situations acknowledge what the speaker is saying by your paralinguistic's, head nodding.
8. Avoid fidgeting with items while some body is talking. This may send wrong messages to the lecturer.

SENTENCE CONNECTORS IN A LECTURE

- **Time-relaters** e.g. earlier, formality, the latter, so far, until now meantime, sine, meanwhile, yet.
- **Enumerator**s-firstly, secondly, in addition, furthermore, most importantly, to begin with, one more thing, finally…
- **Summation**-in the light of this, these then are the meanings of the concept, we can safely conclude that…
- **Reformulation**-used when the speaker wants to restart a fact for one reason or the other e.g. alternatively, another way of putting it is……it would be better to say……. In other words……
- **Result**-e.g. consequently, therefore hence

LECTURE 5: WRITING SKILLS FOR ESSAYS

For lecturers to assess your understanding of lecture material, they will give you assignments. These assignments usually involve essays. These are write-ups that involve continuous writing. They are prose in style. The essay has to have an introduction, body and conclusion. Most students find it extremely difficult to come up with an introduction of their essay.

In this lecture an attempt has been made to assist you write scholarly introduction of essays. Study them and try to master your essay writing skills.

Example 1 of an Essay Introduction

In most cases the words we speak do not bring out the full message because the meanings of the message are usually carried by the manner in which we say it. One important aspect of communication is non-verbal which is expressed in many ways. This essay explores various ways in which non-verbal communication complements oral communication. We shall first look at facial expressions, followed by posture, head nodding and lastly voice pitch, tone and modulation.

Example 2 of essay Introduction

Introduction

From the time we are born up to the end of our earthly life, we are subjected to a stream of decisions. Initially make decisions concerning the affairs of our life. Later when we grow up, other people begin involving us in various decisions. We begin making decisions daily. Some of these decisions are simple, others are complex. This essay explores some of factors involved in decision making. The essay begins by highlighting key elements involved in the decision making process before moving to theories postulated on the best routes to take before one makes a complex decisions. The essay ends with a recommendation of what many scholars believe are the best frameworks for decision making.

Example Three

For any organization to work effectively, the human side of things must be carefully integrated. Many companies take time to study the potential of their senior staff, with a view to appointing

some of them to very senior positions. The people ear marked for such promotions must be seen to have attributes that can help them influence others for hard work. Most companies look at attributes such as ability to communicate, their drive at work, formal education, appearance, supervisory skills and ability for hard work.

The first part of this essay discusses these attributes in detail. The second section will look at methods of recruiting people with these attributes before turning to challenges of maintaining the recruited staff. The essays will end with a critique on the various models postulated on recruitment maintenance and support of the right personnel.

In the three examples above we have been using only one method of introducing an essay. This is STATING THE PLAN OF DEVELOPMENT. If a student uses this method, they have to show the reader how the essay will unfold. They state what they will begin with, followed by what and how the essay will end.

An essay can also begin with the definition of a concept.

Example

Communication can be defined as transfer of a message from an encoder to a decoder. Chuza (2001). Communication is a process that involves the sharing of ideas, feelings and information. An encoder is a person who has a message to share. He can share that information by speech, writing or visual means. In this essay we will discuss the differences between effective and efficient communication.

Another way of writing an introduction is to indicate the purpose of the essay. Essays can do many things.

Examples of purposes of essays:

8. An essay can Discuss
9. An essay can highlight
10. An essay can describe
11. A paper can argue

Consequently after a preamble, the introduction can end by stating what the essay or paper will do. Sometimes an essay may begin by giving a background to the matter.

WRITING THE BODY OF THE ESSAY

The body of the essay should break up into paragraph. Each paragraph should be devoted to one idea. The language in the essay should be scholarly. Avoid informal language, Zambian English, avoid slang and colloquialism, you should also make sure you cite other people's works if the essay is a university assignment. Your essay should have correct spelling, correct grammar.

One of the common problems student have is confusing American English with British English. Many lecturers prefer consistency. If a student opts to use American Standard English, then they should stick to it in their essay. If they however, want to use British, they should also be consistent.

British	American
Travelling	Traveling
Totalled	Totaled
Worshipped	Worshiped
Unequalled	Unequaled
Marveled	Marveled
Panelling	Paneling
Quarrelled	Quarreled
Revellers	Revelers
Cancelled	Canceled
Channelled	Channeled
Chiselling	Chiseling

Parcelled	Parceled
Councellor	Counselor
Signalled	Signaled
Criticised	Criticized
Sympathise	Sympathise
Paralyse	Paralyze
Mobilise	Mobilize
Realise	Realize
Practise	Practice
Recognised	Recognized
Baptise	Baptize
Decentralise	Decentralize
Fertiliser	Fertilizer
Threshing-floor	Threshing floor
Treasure-house	Treasure house
Newly-built	Newly built
No-one	No one
Resting –place	Resting place
Hiding-place	Hiding place
Dwelling-place	dwelling place
Fellow-worker	Fellow worker

Fig-tree	Fig tree
Grape-picker	Grape picker
Plumb-line	Plumb line
Metre	Meter
Theatre	Theater
Centre	Center
Pretence	Pretense
Licence	License
Defence	Defense
Tight-fisted	Tightfisted
Money-lender	money lender
Short-sighted	Shortsighted
Night-time	Nighttime
North-west	Northwest
Open-handed	Openhanded
Pre-eminent	Preeminent
River-bed	Riverbed
Kind hearted	Kindhearted
Life-time	Lifetime
Door post	Doorpost
Drag-net	Dragnet

Ear-rings	Earrings
Eye-witness	Eyewitness
Face down	Facedown
Faint-hearted	Fainthearted
Market-place	Marketplace
Law-breaker	Lawbreaker
Laughing-stock	Laughingstock
Fish-hook	Fishhook
Head-dresses	Headdresses
Re-established	Reestablished
Side-walls	Sidewalls
Sick-bed	Sickbed

British	American
Assistant	Aide
Bitumen	Tar
Brazier	Fire pot
Bring up	Rear
Cock	Rooster
Corn	Grain
Dishes	Basins

Metre	Meter
Eldest	Oldest
Fishing Nets	Fishnets
Handed	Turned
Heap	Pile
ill treat	Mistreat
To and fro	back and forth
Turn him over	hand him over
Centre	Center
Offence	Offense

Spelling Differences

British	American
Lobour	Labor
Colour	Color
Neighbour	Neighbor
Dishonour	Dishonor
Favour	Favor
Flavour	Flavor
Harbour	Harbor
Honour	Honor
Vapour	Vapor

Turmours	Turmors
Rumours	Runors
Clamour	Clamor
Odour	Odor
Enquire	Inquire
Enrol	Enroll
Distil	Distill
Enrolment	Enrollment
Fulfil	Fulfill
Grey	Gray
Goodbye	Goodby

Adapted from Goodrick and Kohlenberger III (1999)

Words that are often mis-spelled by University and College students in their essays

Write	Don't Write
Accommodation	Accomodation
Awkward	Akward
Commemorate	Comemorate
Privilege	Privlige
Exaggerate	Exagerate
Bureaucracy	Bureacracy

Definition	Defination
Writing	Writting
Receive	Receive

LECTURE SIX: CITATIONS AND REFERENCES

When writing university assignments, you will be required to read widely. You will use other people's ideas, expressions in one way or the other. You may make a text quotation, excerpt, or quote a line or passage. When you do this we say you have CITED that material. Citations are allowed when writing University essays or assignments. If you quote or use somebody's works without citing that becomes academic theft. The lecturers who will be marking your assignments are specialists in their fields. They will easily identify other people's works that may have been used without citing. When they notice this, you will be given a failing grade for your assignments. When a student uses material from books without citations he is guilty of an academic offence known as PLAGIARISM.

To quote means getting a line or a paragraph word-for-word. For a quotation involving less than 3 lines you insert the quotation written in a paragraph.

Example

Sanyal reports that in some U.K Universities, because of financial devolution, some units have found creative means of reducing financial dependence on the central administration for staff salaries, " the proportion of staff not wholly financed from University funds has increased from 22% in 1980 to 36% in 1989 (Sanyal 1995:145).

If the quotation goes beyond 3 lines then that quotation should be centred.

Example

While the financial decentralization encourages creativity and to a certain extent self-reliance by units, it has created problems in some American Universities as Sanyal reports:

> **While many Universities have succeeded by such strategies in bringing their expenditure under control, others (Yale University and Columbia University for instance) have suffered setbacks because powerful high income generating departments wish to go their own way (Sanyal 1995:140)**

Citation can also take a form of paraphrasing. To paraphrase means combining your own words with those of the author.

Examples

Rich (1974) notes that sometimes an employee may fail to carry out a policy not from unwillingness but because it lies beyond his capacity. It could also be that the individual has not yet developed the new skills needed to suit the changes. Regarding stakeholders views on the decentralization, Lungu, later largely echoed by Chama (1992), both writing about decentralization in Zambia, found that the bureaucrats in the offices and the ordinary masses had negative views about the 1969 reform. Clarity of the critical aspects of decentralization is alos important. A study conducted by Rondenelli about implementation of government functions in Kenya, Somalia and Tanzania observes that lack of clarity on different aspects of the decentralization among officials at various levels of administration was one major reason decentralization failed in those countries. Fullan (1998) draws attention to the concept of subjective meaning of reforms in educational systems. He asserts that reforms will not succeed unless policy makers and implementers share the meaning of the introduced change. This is echoed by Gaynor (1998), while Ajayi calls for periodic checks on stakeholder commitments to introduced change.

Making critiques to the existing literature

When you become a senior University Student, it will be unacceptable for you to merely quote or paraphrase what you read. You will be expected to analyse, critique or critically review what you read.

An example of a critique of read literature

Case studies done by Galabawa (1993) on the University of Zambia, Mokoena (1999) on the University of Botswana and Passi (1994) on the University of Makerere hold out some promise. However, a critical look at these works shows that this promise has not been fulfilled.

Though Galabawa's case study on the University of Zambia's management of resources was a good attempt to unearth strengths and weaknesses in the management system at the institution; it has a number of weaknesses:

a) The study has heavily glossed over decentralization which holds so much promise for Universities regarding improvement in efficiency and effectiveness in managing the institutions. The issue of decentralization is mentioned in less than one paragraph.
b) On the methodological grounds, the study does not explain details on how data on staff views regarding management of the institution was collected. In its brief statement on decentralization, the study claims there was a call for decentralisation by the majority of staff. But it does not show how many people were interviewed, how many called for this decentralisation or how many were against it.

CITING A GOVERNMENT PAPERS OR A DOCUMENT WRITTEN BY A MINSTRY

Sometimes you read documents written by bodies like the government, Ministry or World Bank. Here the proxy or representative will be that corporate body e.g.

- Ministry of education document (MOE)
- Government of the republic of Zambia (GRZ)
- European Union (EU)
- African Union (AU)

Example

In a policy document released in 1997, the Ministry of education explains the intentions of this decentralization:

> **The Ministry's decision to decentralize and establish Education boards at school, college and District levels is meant to take decision-making closer to the points of delivery where the action is taking place. This will in turn allow for more rapid reaction and action to [problems and/or opportunities that occur at these points of delivery thereby improving the learning environment and consequently the type of education provided (MOE 1997:5).**

Other guidelines on citations

1. One of the common methods of citations is the Harvard system which we have been using so far in our examples of citations. This system, as you have noticed is the author-date-in-text style. You only put in the essay the authors name, date when the work was published. The rest of the details about that book will come at the end of the essay under REFERENCES.
2. When the author's name is part of the sentence you should cite as follows:
   Neil (1998) has argued that University education benefits the entire nation or
   In his argument Neil has clearly asserted that University education benefits the entire nation (1998).
   You can put the date immediately after the author's name or you may split the name and the data, as long as the citation is part of the grammatical construction.
3. When the author's name is not part of the syntactical or grammatical construction, you should cite as follows:
   The obvious role of a parent is to provide for his siblings, (Moono, 1992)
4. When you mention specific statistics you need to cite the sources. e.g.
   In 2010, UNZA and CBU increased student enrollment by 36% (Siliga, 2010)
5. When many authors have talked about the same idea, cite them as follows:
   Communication is understood better as a process (Millan, 2001; Ajayi, 2004; Nkonde, 2006). Here take note of the punctuation marks
6. When there are many authors who have written one book, you can use **et al** instead of citing them all

Example

A book written by Robert Kreitner, Micheal Fielding, James Potus, Felix Lupata, Edward Nkonde.

You could cite Kreitner etal (2010). This means Kreitner and others.

7. Where there are two authors, give the surnames of them in the order they appear in the book. For instance a book written by Herta .A. Mattew and Charles.E. Peck,
   Write Murphy and Peck (2000) argue that people skills are important.

8. Where your lecturer wants you to use other systems, follow their style. For instance, some lecturers may prefer the **foot notes** or **end notes** system. You can follow their preference.
9. Don't include the authors titles in your citations e.g. professor Lungangu or Father Patrick or Dr.Ndepo. Just write their surname without their Titles.
10. At the end of the essay provide the list of references. Some people confuse Bibliography with references. The list of books you give at the end of your essay should be called REFERENCES and **NOT** Bibliography. Use the word "Bibliography" if you really understood the term. References are a list of books you have actually used or referred to when writing the essay. Bibliography is a list of books or literature available on a given subject. It may include the books you haven't actually used, but they are important on the subject under discussion. Researchers provide Bibliography when they want other people to read the other books on the matter or subject.

WRITING REFERENCES

When writing references, you should use the following details about the book.

1. Author's surname
2. Authors initials
3. Year the book was published
4. Edition e.g. 1st, 2nd, 4th edition
5. Title of the book
6. Publishers e.g. McMillan, Longman, UNZA press
7. Town in which the book was published
8. For journals also take note of the full name of the journal, the volume number, number issue and the page numbers of the article.

LA 111/ NR120 OCTOBER 2021 MOCK EXAM. This is merely for your practice. i.e do not submit for marking

INSTRUCTIONS

1. Time allowed 3 hours
2. There are 10 Questions in this paper. You are expected to **attempt any five.**
3. All Answers must be couched in standard English
4. Indicate on your Answer sheet the number of Questions you have attempted e.g 8,5,1,3.

QUESTION ONE

Your boss, Barbara Chanda has asked for a report on the number of physically handicapped people employed by Warner Dennison and how their performance is rated by their superiors in terms of safety, attendance, and job performance. This information has been requested by the General Manager Calvin Tembo for a talk he is planning to give to a local civic organization. You are to supply whatever data you think will be helpful.

To get the information you need, you sent a questionnaire to all executives and department managers in the company asking them to give you the total number of handicapped workers employed in five categories – professional and technical, supervisory and management, clerical, craftsmen and laborers and to rate those in each category as above average, or below average. Following is the information you obtained.

PROFESSIONAL AND TECHNICAL

Total employed: 82. In terms of safety, 40 of these were rated above average, 41, average, and 1 below average. In terms of attendance, 33 were rated above average, 40 as

average, and 9 below average. As to job performance, 32 were rated above average, 45 average, and 5 below average.

SUPERVISORY AND MANAGEMENT

Total employed: 38. In terms of safety, 22 were rated as above average, 16 average, and 0 as below average. In terms of attendance 16 were rated above average, 20 as average, and 2 as below average. In job performance, 15 were rated above average, 21 average, and 2 below average.

CLERICAL

Total employed: 65, as to safety, 34 were rated above average, 30 as average and 1 below average. In terms of attendance, 35 were above average, 25 average, and 5 below average. In job performance, 27 were rated above average, 32 average and 6 below average.

CRAFTSMEN

Total employed: 110. In safety, 39 were rated above average, 67 as average and 4 below average. In attendance, 40 were rated above average, 52 as average, and 18 as below average. As to job performance, 30 were considered above average, 60 average, and 20 as below average.

LABOURERS

Total employed: 14. As to safety, 3 were rated above average, 10 as average, and 1 as below average. In terms of attendance, 4 were rated above average, 9 average and 1 below average. Concerning job performance, 2 were rated above average, 8 average and 4 below average.

Many of those reporting made enthusiastic comments about their handicapped workers. The most consistent reason given for the outstanding performance of these people is that they have a higher degree of motivation, presumably because they appreciate the opportunity to work.

Included in the handicapped category are people who are blind, partially sighted, and deaf, as well as amputees, paraplegics and others crippled from various causes – polio, accidents, birth defects etc.

Change the passage into well numbered and orderly notes.

QUESTION TWO

List and discuss four ways of introducing and concluding academic papers.

QUESTION THREE

Imagine you have received a letter from a client who feels your company provided poor service at the your 2006 Ndola Trade Fair stand. The letter is couched in emotional and insulting language.

(a)Draft elaborate guidelines to your staff in the company to teach them public relations skills when dealing with clients.

QUESTION FOUR

Explain in detail how the committee secretary and the chairman at a work place could work effectively and efficiently in committee meetings.

QUESTION FIVE

Using imaginary examples show how you could use the Harvard system to provide citations and references in the following situations:

Citations

(a) Citations in the text (essay or report) of works having six authors
(b) Citations of a paraphrased ideas postulated by various authors of different works.
(c) Citations of a quoted involving 10 lines
(d) Citations of a quoted idea from Davy Zimba's article from the TIMES of zambia dated 13 th Feb 2007
(e) Citations of works from GRZ papers

QUESTION SIX

State and discuss the advantages and disadvantages of oral communication basing your argument on cited examples.

QUESTION SEVEN

Write a 450 word essay on one of the following topics:

(a) Choice of media of communication
(b) Various ways of stopping student riots in African universities

QUESTION EIGHT

Read the passage below and change it into well numbered notes and appropriate main title,headings and subheadings. (25 marks)

There are numerous varieties of the English language, and what we ordinary mean by 'English' is a common core or nucleus which is realized only in the different forms of the language that we actually hear or read. We can distinguish six kinds of varieties ranged as below and interrelated in ways we shall attempt to explain.

The fact that in this figure the 'common core' dominates all the varieties means that, however esoteric or remote a variety may be, it has running through it a set of grammatical and other characteristics that are common to all. From this initial point onwards, it is claimed by the sets of braces that each variety class is related equally and at all points to each of the other variety

classes. We shall however return and make qualifications to this claim. The classes themselves are arranged in a meaningful order and the justification will become clear in what follows.

Varieties according to region have a well-established label both in popular and technical use: ‘dialects’. Geographical dispersion is in fact the classic basis for linguistic variation, and in the course of time, with poor communications and relative remoteness, such dispersion results in dialects becoming so distinct that we regard them as different languages. This latter stage was long ago reached with the Germanic dialects that are now Dutch, English, German, Swedish, etc, but it has not been reached (and may not necessarily ever be reached, given the modern ease of communication) with the dialects of English that have resulted from the regional separation of English-speaking communities both within the British Isles and throughout the world.

Regional variation seems to be realized predominantly in phonology. That is, we generally recognize a different dialect from a speaker’s pro-nunciation before we notice that his vocabulary (or lexicon) is also distinctive. Grammatical variation tends to be less extensive and certainly less obtrusive. But all types of linguistic organization can readily enough be involved.

It is pointless to ask how many dialects of English there are: there are indefinitely many, depending solely on how detailed we wish to be in our observations. But they are of course more obviously numerous in the long-settled Britain than in the more recently settled North America or in the still more recently settled Australia and New Zealand. The degree of generality in our observation depends crucially upon our standpoint as well as upon our experience. An Englishman will hear an American Southerner primarily as an American and only as a Southerner in addition if further subclassification is called for and if his experience of American English dialects enables him to make it. To an American the same speaker will be heard first as a Southerner and then (subject to similar conditions) as, say, a Virginian, and then perhaps as a Piedmont Virginian. One might suggest some broad dialectal divisions which are rather generally recognized. Within North America, most people would be able to distinguish Canadian, New England, Midland, and Southern varieties of English. Within the British Isles, Irish, Scots, Northern, Midland, Welsh, South-western, and London varieties would be

recognized with similar generality. Some of these – Irish and Scots for example – would be recognized as such by many Americans and Australians too, while in Britain many people could make subdivisions: Ulster and Southern might be distinguished within Irish, for example, and Yorkshire picked out as a subdivision of northern speech. British people can also, of course, distinguish North Americans from all others (though not usually Canadians from Americans), South Africans from Australians and New Zealanders (though mistakes are frequent), but not usually Australians from New Zealanders.

Within each of the dialect areas, there is considerable variation in speech according to education and social standing. There is an important polarity of uneducated and educated speech in which the former can be identified with the regional dialect most completely and the latter moves away from dialectal usage to a form of English that cuts across dialectal boundaries. On the other hand, there is no simple equation of dialectal and uneducated English. Just as educated English cuts across dialectal boundaries, so do many features of uneducated use: a prominent example is the double negative as in I don't want no cake, which has been outlawed from all educated English by the prescriptive grammar tradition for hundreds of years but which continues to thrive in uneducated speech wherever English is spoken.

Educated speech – by definition the language of education – naturally tends to be given the additional prestige of government agencies, the learned professions, the political parties, the press, the law court and the pulpit – any institution which must attempt to address itself to a public beyond the smallest dialectal community. The general acceptance of 'BBC English' for this purpose over almost half a century is paralleled by a similar designation for general educated idiom in the United States, 'network English'. By reason of the fact that educated English is thus accorded implicit social and political sanction, it comes to be referred to as Standard English, and provided we remember that this does not mean an English that has been formally standardized by official action, as weights and measures are standardized, the term is useful and appropriate. In contrast with Standard English, forms that are especially associated with uneducated (rather than dialectal) use are often called 'substandard'.

The degree of acceptance of a single standard of English throughout the world, across a multiplicity of political and social systems, is a truly remarkable phenomenon: the more so since the extent of the uniformity involved has, if anything, increased in the present century. Uniformity is greatest in what is from most viewpoints the relatively unimportant matter of spelling. Although printing houses in all English-speaking countries retain a tiny area of individual decision (some preferring *–ise* and others *–ize* in words like *realize;* some preferring *judgment* and others *judgement; etc),* there is basically a single system, with two minor subsystems. The one is the subsystem with British orientation (used in all English-speaking countries except the United States) with distinctive forms in only a small class of words, *colour, centre, levelled, etc.* The other is the American subsystem: *color, center, leveled, etc.* In Canada the British subsystem is used for the most part, but some publishers (especially of popular material) follow the American subsystem and some a mixture (color but centre). In the American Mid-West, some newspaper publishers (but not book publishers) use a few additional separate spellings such as thru for though.

In grammar and vocabulary, Standard English presents somewhat less of a monolithic character, but even so the world-wide agreement is extra-ordinary and – as has been suggested earlier – seems actually to be increasing under the impact of closer world communication and the spread of identical culture, both material and non-material. The uniformity is especially close in neutral or formal styles (1.12) of written English (1.11) on subject matter (1.10) not of obviously localized interest: in such circumstances one can frequently go on for page after page without encountering a feature which would identify the English as belonging to one of the *national standards.*

There are two national standards that are overwhelmingly predominant both in the number of distinctive usages and in the degree to which these distinctions are ‘institutionalized’: American English and British English. Grammatical differences are few and the most conspicuous are widely known; the fact that AmE has two past participles for *get* and BrE only one (3.14), for

example, and that in BrE the indefinite pronoun one is repeated in co-reference where AmE uses *he* as in

One cannot succeed at this unless { one} tries hard

he

Lexical examples are far more numerous, but many of these are familiar to users of both standards: for example, *railway* (BrE), *railroad* (AmE); *tap* (BrE), *faucet* (AmE); *autumn* (BrE), *fall* (AmE). More recent lexical innovations in either area tend to spread rapidly to the other. Thus while radio sets have had *valves* in BrE but *tubes* in AmE, television sets have cathode ray *tubes* in both, and *transistors* are likewise used in both standards.

Scots, with ancient national and educational institutions, is perhaps nearest to the

self-confident independence of BrE and AmE, though the differences in grammar and vocabulary are rather few. Irish (or Hiberno-) English should also be regarded as a national standard, for though we lack descriptions of this long-standing variety of English it is consciously and explicitly regarded as independent of BrE by educational and broadcasting services. The proximity of Britain, the easy movement of population, and like factors mean however that there is little room for the assertion and development of separate grammar and vocabulary.

Canadian English is in a similar position in relation to AmE. Close economic, social, and intellectual links along a 4000-mile frontier have naturally caused the larger community to have an enormous influence on the smaller, not least in language. Though in many respects Canadian English follows British rather than United States practice, in many other respects it has approximated to AmE and seems likely to continue in this direction.

South Africa, Australia and New Zealand are in a very different position, remote from the direct day-to-day impact of either BrE or AmE. While in orthography and grammar the South African English in educated use is virtually identical with BrE, rather considerable differences in vocabulary have developed.

New Zealand English is more like BrE than any other non-European variety, though it now feels the powerful influence of Australia and – to no small degree – of the United States.

Australian English is undoubtedly the dominant form of English in the Antipodes, and it is even exerting an influence in the northern hemisphere, particularly in Britain, though much of what is distinctive in Australian English is confined to familiar use.

Change the passage above into well numbered and orderly NOTES

QUESTION NINE

Using imaginary examples show how you could use the Harvard system to provide citations and references in the following situations:

Citations

(f) Citations in the text (essay or report) of works having six authors

(g) Citations of a paraphrased ideas postulated by various authors of different works.

(h) Citations of a quoted involving 10 lines

(i) Citations of a quoted idea from Davy Zimba's article from the TIMES of zambia dated 13 th Feb 2007

(j) Citations of works from GRZ papers

QUESTION TEN

State and discuss the advantages and disadvantages of oral communication basing your argument on cited examples

QUESTION ELEVEN

Write a 500 word essay on one of the following topics:

(c) Effective company Communication
(d) Effective listening during note taking
(e) Types of communication

QUESTION TWELVE

(**a) LIST the 8 parts of a formal letter**

(b) You are a senior officer at LUMWANA mine. You decided to invite a very busy officer from Cabinet office to come and give a talk to your workers on the world economic recession and governments response to the problem. Formally Communicate this information to them

QUESTION THIRTEEN

You have been asked to investigate a problem in your company, draw conclusions and recommend action select a specific problem such as pilferage, absenteeism or HIV/Aids prepare a 400 word fact finding report on the scourge.

QUESTION FOURTEEN

(a) What is citation?

(b) List four reasons why citation is important to University Students

(c) Below is a List of literature a student consulted before writing their assignment.

Arrange the literature material in a bibliography using the Harvard system

Jumbled Up Literature Elements

(i) Corporate Governance and the OECD article by Richard Frederick Published in the Accounting and Business Journal June 1999 Volume 2 No. 6 page 26 publishers ACCA.

(ii) Venture capital or private equity? The Asian experience. Article by Sayed Ahmed Nagi and Samathala Hethena pages 335 – 355 in the Business Horizons journal volume 50 No. 4 published by the Kelly School of Business in London, in 2007.

(iii) Mathematics for Accountants and Managers By R F J Dewhurt Senior Lecturer School of Business Studies, University of Warwick published by Heinemann in London in 1976 3rd edition.

(iv) Encyclopedia of Business information sources. Edited by professor Paul Woy Wasserman. Published by Gale Research Company in 1980 in Detroit 4th Edition.

QUESTION FIRFITEEN

***INSTRUCTIONS*:** **IDENTIFY SPOKEN ENGLISH IN THE PASSAGE BELOW WHICH SHOULD NOT APPEAR IN MINUTES**

Chanda: "Ah, Mr. Secretary, good day to you; is everyone here?"

Sililo: "Let me see, Mr. Mulenga, the new Catering Officer is here, Miss Zulu from accounts. Mr. Banda from Tailing plant, but I can't see Mr. Zimba from stores and you remember that Mrs. Phiri gave her apologies in advance at the last meeting as she is on leave; so Bookshop will not be represented."

Chanda: "I don't think that we will wait for Zimba, we have a quorum, so lets begin. I call this meeting to order. There is no need to read the summons concerning the meeting and you all have the minutes of the last meeting. Any amendments?

Zulu: "Yes, Mr. Chairman, I have been left out of the list of those in attendance but you can see from item 6 that I was present because I reported on the availability of new cups from Shoprite".

Sililo: "Apologies Mary, I remember now that you came a little bit late so you didn't sign the attendance".

Chanda: Let us not make that mistake again. Her work-fellows know that she gets time off to attend these meetings and if she takes the time off and then

doesn't attend the meetings, she could be in trouble with them. Any more corrections? No? Good, I will sign the minutes then. Now, any matters arising……Mr. Secretary?"

Sililo: "Yes, Mr. Banda and Zimba were supposed to get their heads together to work out different tea break times for their departments, so that they don't all try to get in here together."

Chanda: "Mr. Banda?"

Banda: "Well we can't agree. Our work-fellows all want to be here first but feel our work is harder than Bookshop so we need the break earlier."

Chanda: "So, we'll have to wait for Zimba. Anything else?"

Sililo: "Yes, the matter of Saturday opening."

Chanda: "Yes, I've talked to the General Manager and he doesn't think it's worth opening the canteen just for a morning tea break if we aren't going to provide lunch on the same day. Ah Mr. Zimba…….. come in, we started without you".

Zimba: "Sorry to be late. One book went missing and you know our rule, no one leaves till the book is found."

Sililo: Mr. Zimba, what about the morning tea break times?"

Zimba: "It's OK my chaps have given in. they will take the later time if I can get assurance that the tea and bread will-not run out."

Chanda: "Mr. Mulenga ……. I do apologize, I should have properly welcomed you to this committee. To tell the truth, I have seen so much of you since you joined us three weeks ago that I forgot that you have not yet attended one of these meetings. You know everyone here, I suppose…….

Mulenga: "Yes thank you Sir, and as to there being enough leftovers for the late comers, don't you worry about that even though I am busy making up that report you asked to be ready for next month's meeting on the refrigeration needs."

Chanda: "Fine, we'll put the new time into operation on Monday if that gives the Secretary enough time to inform all the people."

Sililo: "Not really Mr. Chairman, this is Friday afternoon already. Can we agree to start the new system on Tuesday? That will give me time to inform everyone, otherwise we might get into some confusion."

Chanda: "Right, we'll start on Tuesday. Bookshop 09.45 to 10.05 hours Stores 10.10 to 10.30 hours and the rest after that."

Zulu: "Good Lord! Look at the time. I've a meeting with the Company Secretary in five minutes. Is there any pressing business or shall we let Mr. Mulenga find his ay around for next month's meeting before we start chasing him?"

Sililo: "There is no news about our application for a bar licence, so the question of opening the canteen in the evening for should start thinking about the Christmas party but that can wait until next month."

Chanda: "So can we adjourn?"

Chanda: "Meeting adjourned till next month, same place, same time."

You look at your watch, its 16.00 hours.

QUESTION SIXTEEN

Miss Esnart Bwalo is a sales person with Compaq Company. In the past 5 years the sales of the products are as described below.

In 2000 she sold desktops for K605,000,000 Telephone had sets K305,000,000 laptops K900,000,000, Accounting software K470,000,000 machines K507,007,000 printers K206,000,000

The following year, the figures were desktops K120,000,000, Telephone handsets K700,000,000 laptops K902,000,000 Accounting software K130,000 Fax machines K205,000,000, printers K700,000,000.

In 2002 the sales were K600,000,000 for desktops, K800,000,000 for Telephone handsets, K901,000,000 for laptops, K700,000,000 for Accounting software K500,000,000 for fax machines and K140,000,000 for printers.

In 2003 the sales were as follows: for desktops K90,000,000 Telephone handsets K600,000,000 laptops K903,000,000, Accounting software K150,000,000, fax machines K25,000,000 printers K705,000,000.

The 2004 sales were summarized as follows: Desktops K405,000,000 Telephone handsets K700,000,000 laptops K890,000,000. Accounting software K90,000,000 fax machines K120,000,000 and printers K701,000,000.

(a) Briefly describe the sales in 100 words bringing out the picture of the sales each year. (10 marks).

(b) Make a well reasoned recommendation for the focus of sales, Compaq of company should concentrate on. (5 marks)

(d) Draw an appropriate graphic to describe the sales in the past 5 years.
