INTRODUCTION TO INFORMATION AND COMMUNICATION TECHNOLOGY (ICT 100)

GROUP PRACTICAL ASSIGNMENT

ASSIGNMENT QUESTION:

Design a user-friendly food ordering system in Microsoft excel that:

- Allows customers to select dishes from a menu.
- Applies a 10% discount when more than two dishes are ordered
- Calculates subtotals, tax (17.5%), and final totals.

Assignment structure

1. Menu sheet
   - Columns: Dish name, category, price.
     Sample Entries: Grilled chicken – Main course K120.00
     Caesar Sala – Appetizer K25.00
     Chocolate Cake – Dessert K35.00

Students can customize the menu with at least 6 diverse items.

2. Order Form Sheet
   - Customer details: Name, Contact information
   - Order Section: Dropdown menus to select dishes.
   - Quantity input for each selected dish.

Calculations:

- Subtotal: Sum of (price *quantity) for all items.
- Discount: 10% off if more than two dishes are ordered.
- Tax: 17.5 % of the subtotal after discount.
- Total: Subtotal – Discount + Tax.

Guide:

Use Excel functions like IF, SUM, and VLOOKUP to automate calculations.

3. Interface Design
   - Utilize cell formatting, borders, and colors to enhance readability
   - Implement data validation for dropdown menus.
   - Protect formula cells to prevent accidental edits.
